THE OFFICE OF THE HEAD
FORENSIC SCIENCE LABORATORY
PRETORIA
0007

2020-09-30

DE DEUR CAS 117/03/2020

1. The nail clippings (PA4002515119, "DR 301/20") with respect to the above mentioned case have been received and analyzed by the laboratory.
2. The DNA profile of the alleged daughter was received from Interpol Manchester (TTU-127265550-20, Barcode 52022383) with a request date of 10 September 2020. This was used for the finding in paragraph 3.
3. The results obtained are consistent with the donor of the reference sample (PA4002515119, "DR 301/20") being the biological father of the donor of the reference sample (TTU-127265550-20, Barcode 52022383).

3.1 The probability of paternity is 99.92%;

3.2 The alleged father (PA4002515119, "DR 301/20") has a 1200 times bigger chance of being the biological father of the donor of reference sample (TTU-127265550-20, Barcode 52022383), than any other randomly chosen individual within the Asian population group taken from the most conservative allele frequencies of the South African population.

4. The strength of the statistical calculations, calculated above, can be compared to the following table indicating the strength of statistical calculations relating to paternity.

Table 1.

Acceptance of Paternity	Probability of Paternity	Range of Paternity	Evidence Strength or Support
99.80% - 99.90+%	Actual proof	399 - 1000+	Strong
99.10% - 99.79%	Very probable	99 - 398	Good
95.00% - 99.09%	Quite probable	19-98	Fair
90.00% - 94.99%	Probable	9-18	Weak
80.00% - 89.99%	Uncertain (undecided)	4-8	Weak
Less than 80.00%	Not useful	1-3	Weak

5. You are welcome to contact the undersigned should you have any questions in this regard, by quoting the above-mentioned lab number.
